WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 44 x 2 mm tube about 568 mm long and trim to fit.
It rises at 69.5 degrees from the nose beam to the head tube.
Foot: cut at 20.5 degrees off square so it stands flat on the nose beam's top, centred on the beam (30 mm from its rear face).
Top: fish-mouth it onto the 50 mm head tube at 40.5 degrees included angle (print a tube-mitre template). Its axis meets the head tube's axis 100 mm above the head tube's bottom end.
Centre to centre along its axis: 559 mm.
Welded on later (sheet 105): two cradle tabs on its top (rider side), and the controller plate on its left side, low down.
Check: with the frame in the jig, the tube sits flat on the beam and the head tube's angle reads 70 degrees from the ground plane.
