WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

End caps (2): 60 x 30 x 3 mm plate, welded over the rails' rear ends; the upper stays land on them.

Tension lugs (2): 20 x 13 x 10 mm, cut from 20 x 10 flat bar; 8.5 mm hole along the rail, 7 mm out from the rail. Weld to the outer face of each rail 2 to 12 mm from its rear end, centred 42 mm up.

Kickstand plate: 50 x 36 x 4 mm, on the left rail's outer face 225 to 275 mm from its rear end, 2 mm up; drill to suit the kickstand.

Cradle tabs (2): 40 mm of 30 x 12 flat bar, one face filed to a 22 mm radius to sit on the down tube; top 10 mm above the tube. Drill 5 mm and tap M6 through. Centres 240 mm apart, the lower one 182 mm up the tube from its foot, on its rider side.

Controller plate: 160 x 50 x 3 mm on the down tube's left side, from 20 to 180 mm up the tube; four holes to suit the controller.

Grind every weld on a surface another part sits on flat.
