WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Clamp sleeve: 80 mm of 33.7 x 2.3 tube (bore 29.1 mm, a slip fit on the 28.6 mm steerer). Saw a 3 mm slot 50 mm up from its bottom at the back; weld two 13 x 6 x 30 mm lugs either side, drill 6.5 and tap one M6, for two M6 clamp bolts.

Column: 38 x 2 tube 441 mm long; it slides 30 mm over the sleeve's top and is welded all round; 3 mm cap plate on its top.

Stem: 53 mm of 30 x 2 tube, horizontal, welded to the column's back, its centre 20 mm below the column top.

Bar clamp: 40 mm of 26.9 x 2.3 tube (bore 22.3), crosswise on the stem's end, slotted underneath with two M6 bolts like the sleeve.

Fit: the sleeve sits on the headset top cover and clamps the steerer; the bar centre ends up 1230 mm above the ground.

Check: column and steerer in line within 1 mm over 400 mm.
