REVISION HISTORY

Version	Date	Author	Change
0.3	2026-10-02	Amish Chadha	Items 13 and 14 decided by Amish on 2026-10-02; balance test added to item 1
0.2	2026-09-25	Amish Chadha	Recommendations accepted by Amish (DDR-002)
0.1	2026-09-25	Amish Chadha	Record Amish's 2026-09-25 decisions on the TRL 2 review, the move to SwapCell interface v0.3 and the items that stay open

0001: TRL 2 review decisions

- **Date:** 2026-09-25
- **Status:** accepted (items 1 to 12); item 15 decided by Amish, 2026-09-25: go with recommendation (see SGN-DDR-002); items 13 and 14 decided by Amish on 2026-10-02 ("i approve your recommendations for all 555 open decisions.")

■ Context

The TRL 2 review note (`docs/REVIEW.md` , session "concept change to a walking-treadmill vehicle") listed nine items as "Proposed, awaiting Amish", most with a recommendation. On 2026-09-25 Amish reviewed the review points for every portfolio repo and wrote: "proceed with all of your recommendations across all batches. Make sure we don't proceed to TRL 4 on any of them." In the same instruction he approved three additions to the SwapCell interface (a wake method for hosts without CAN, a charge-while-discharging mode and a latch vibration rating for vehicles), a pricing rule for shared SwapCell packs, and a rule that community designs pick co-design partners per area later. He also confirmed the move of StepGen from the CleanTech area to Mobility and Logistics.

The concept change itself (a walking-treadmill vehicle instead of a stationary stepper generator) was decided by Amish on 2026-09-24 and is recorded in SGN-PRB-001, SGN-PRC-001 and the review note. It is not repeated here.

This record lists what the 2026-09-25 instruction decides, and what it leaves open because there was no recommendation to accept. TRL 4 is on hold by Amish's instruction.

■ Options considered

The options for each item are in `docs/REVIEW.md` (TRL 2 session) and SGN-PRC-001 v0.3. They are not repeated here.

■ Decision

Table 1. Decided items. Each is "Decided by Amish, 2026-09-25: go with recommendation" unless the row says otherwise.

#	Item	Decision	Where it now lives
1	Form factor	Decided by Amish, 2026-09-25: go with recommendation. Two-wheel, long-wheelbase, bike type (about 2.35 m) so that a natural stride fits on the belt; the three-wheel tadpole version stays open until co-design shows whether non-cyclists can balance. Decided by Amish, 2026-10-02: keep two wheels for now and make balance a fixed co-design test: if most non-cyclists cannot ride at walking pace after a short trial, the three-wheel version is designed	SGN-PRC-001 v0.4, SGN-DWG-001
2	Wheels	Decided by Amish, 2026-09-25: go with recommendation. 20 in (ETRTO 406) front and rear	SGN-PRC-001 v0.4, bom/bom.csv items 6 and 7
3	Motor and speed class	Decided by Amish, 2026-09-25: go with recommendation. 250 W rated rear geared hub, assist cut at 25 km/h, 15 km/h beginner mode (EU pedelec limits)	SGN-REQ-001 R3 and R4
4	Target range	Decided by Amish, 2026-09-25: go with recommendation. 30 km at 20 km/h on the flat on one SwapCell pack	SGN-REQ-001 R5
5	Regeneration	Decided by Amish, 2026-09-25: go with recommendation. No roller generator in the first concept; keep a mounting point on the front roller. SwapCell v0.3 mode 4 now removes the interface gap, but the decision stands	SGN-PRC-001 v0.4
6	Area	Decided by Amish, 2026-09-25: go with recommendation, and confirmed for this session. <code>area</code> moves from CleanTech to Mobility and Logistics, matching SunSpoke and WaterWalker	<code>project.yaml</code>
7	Budget	Decided by Amish, 2026-09-25: go with recommendation. <code>budget_usd</code> raised from \$400 to \$650, SwapCell pack excluded	<code>project.yaml</code> , SGN-REQ-001 R12
8	Legal route	Decided by Amish, 2026-09-25: go with recommendation. Pick a first target country and confirm the vehicle's legal category there before any road use. Which country is not decided (item 14)	SGN-PRB-001 v0.4, SGN-REQ-001
9	SwapCell interface	Decided by Amish, 2026-09-25 (cross-cutting): StepGen builds to SwapCell interface v0.3. It uses item W (10 kΩ coding resistor in the INTERLOCK loop, which wakes the pack), fits a receiver to item V (latch class V1: 1.72 kN pack latch proof, 330 N or more receiver preload) and does not use item C (charge-discharge mode) because no generator is fitted	SGN-REQ-001 R11 and R13, SGN-PRC-001 v0.4
10	Shared pack pricing	Decided by Amish, 2026-09-25 (cross-cutting): the SwapCell pack is priced once, in the SwapCell BOM, and excluded from the StepGen budget	<code>bom/bom.csv</code> item 11, <code>bom/bom-notes.md</code>
11	Co-design partner	Decided by Amish, 2026-09-25 (cross-cutting): community designs pick co-design partners per area later. The partner stays open	SGN-PRB-001 v0.4
12	Decision record	Decided by Amish, 2026-09-25: go with recommendation (TRL 2 suggestion). This record is SGN-DDR-001	This file

Items that remain open

Items 13 and 14 had no recommendation to accept and stayed **Proposed, awaiting Amish** until Amish decided them on 2026-10-02. Item 15 arose at TRL 3 and is now decided (SGN-DDR-002):

- **13. First user group.** Non-cycling adults, older adults or commuters. No preference was stated, and the partner is left open by item 11. **Decided by Amish, 2026-10-02:** non-cycling adults of working age who walk or take transit, with older adults as the second group once balance is understood.
- **14. First target country** for the legal classification (item 8 decides the route, not the country). **Decided by Amish, 2026-10-02:** the Netherlands, confirming the category with the Dutch vehicle authority (RDW) before any road use.
- **15. New TRL 3 items** from SGN-CAL-001: the cost overrun against the new \$650 budget, belt length for tall riders, deck rail size for weld fatigue, and a key switch in the INTERLOCK loop. **Decided by Amish, 2026-09-25: go with recommendation.** Salvage reference build within \$650, belt kept at 1.05 m until co-design, 60 x 30 x 2 mm deck rails, key switch in series with the coding resistor. Recorded in SGN-DDR-002.

■ Consequences

- SGN-PRB-001, SGN-PRC-001 and SGN-REQ-001 move to version 0.4 (they were already at 0.3 from the 2026-09-25 concept change) and no longer mark items 1 to 12 as proposed.
- R12 now reads \$650. The priced BOM is about \$713, so R12 is **not met** (SGN-CAL-001); options are in the review note. Update: under SGN-DDR-002 the salvage route became the reference build (\$546), so R12 is now met on paper.
- R11 now cites SwapCell interface v0.3, and a new requirement R13 covers pack retention to latch class V1.
- TRL 3 is the hard stop. TRL 4 (a test article, lab tests and a build log) is on hold by Amish's instruction.
